

ABSTRACT OF THE DISCLOSURE

When a preview of a job that combines data to be printed output from an application is presented, an information
5 processing apparatus includes, for the purpose of
presenting a preview considering the setting of each print
job, an intermediate data conversion unit that converts
print data created by the application to an intermediate
code format and stores the converted intermediate code
10 format data and processing conditions of the print data,
an editing unit that edits the data converted to an
intermediate code format or processing conditions of the
print data, a data creation unit that creates print data
and processing conditions that implement print processing
15 different from the print data created by the application
based on the edited data and a preview display control unit
for displaying the print processing result in advance based
on the created print data and processing conditions.
